Patent No. 6432916

GENERAL INFORMATION:
APPLICANT: Probst. Peter
APPLICANT: Bhatla, Ajay
APPLICANT: Skeiky, Yasir
APPLICANT: Skeiky, Yasir
APPLICANT: Skeiky, Yasir
APPLICANT: Naisonneuve, Jeff
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND
TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
FILE REFERENCE: 201012, 469C5
CURRENT APPLICATION NUMBER: US/09/556,877
CURRENT FILING DATE: 2000-04-19
NUMBER OF SEQ ID NOS: 300-04-19
SOFTWARE: FastSEQ for Windows Version 3.0/4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels 249;

                                                                                                   (PMP) E and PMPI and nucleic acid molecules encoding such proteins.

PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or amellorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID), lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infeartility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is

AAY36754-Y37949 are encoded by open reading frames (ORFS) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salphingitis, perihepatitis, bartholinitis; pneumopathy in breat feeding infants; and venereal lymphogranulomatosis. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are an immunogenic portion of a chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                     compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease.

the
vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia-specific T-cell response or inhibiting the development of a Chlamydia infection in an animal. Methods from the present invention can be used: for detecting the presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia protein; and for treatment of a Chlamydia in infection. ABL921394 to ABL92109 and ABB94096 to ABB94314 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                               240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and corrections in heart is pathogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence

                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is provided in a specification relating to compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for accinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease.

                                                 vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a chlamydia-specific T-cell response or inhibiting the development of a chlamydia infection in an animal. Methods from the present invention can be used: for detecting the presence of chlamydia in a patient; to stimulate and/or expand T cells specific for a chlamydia protein; and for treatment of a chlamydia infection. ABL92394 to ABL92099 and ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention.
The present invention describes compositions comprising a Chlamydia Capl protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in
                                                                                                                                                                                                                                                                                           135
                                                                                                                                                                                                                                                                                                                   148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID), lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID). Iymphoptanuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is Chlamydia trachomatis L2 PMPE protein fragment.
                                                                                                                                                                                                                                                                                                                             for preparing vaccines for preventing or treating diseases associated with Chlamydia infection such as trachoma, and infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as artigens for the production of antibodies that may be used doetect Chlamydia proteins in samples (e.g. via enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                              Antigen; anti-inflammatory; respiratory; antibacterial; anti-asthmatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are preddicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as alterosclerosis, coronary artery disease, carotid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in PCR, branched Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae expression. The present sequence represents a pneumoniae gene expression. The present sequence represents a pecifically claimed Chlamydia pneumoniae protein of the invention.
                                                                                                                                                                       human respiratory disease; cardiovascular disease; atherosclerosis; coronary artery disease; carotid artery stenosis; myocardial infarction; cerebrovascular disease; aortic aneurysm; claudication; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes
                                                                                                                                                      Chlamydial infection; antigen; immunogen; vaccine; diagnosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory diseases such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae mucleotides sequences an also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                    Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               57 YLDNLRYILAILQKTPNEGAAVTITDYLSFFDTQKEGIYFAKNLTPESGGAIGYASPNSP 116

                                                                                                                                                                                                                                                                                       28;
                                                                                                     frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and disease, is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAX34584-Y35879) can be used in nucleotides sequences can also be used as immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

28; C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked immunosorbant assay (ELISA)). 56 FLFYLGNFTACMFGMTPAVYSLQTDSLEKFALERDEEFRTSFPLLDSLSTLTGFSPITTF 115 47 TGDTHNLT-NCYLDNLRYILAILQKTPNEGAAVTITDYLSFFDTQKEGIYFAKNLTPESG 105 106 GAIGYASPNSPTVEIRDTIGPVIFENNTCCRPFTSSNPNAAVNKIREGGAIHAQ-NLYIN 164 77; Gaps 6 FFFLIGNSLSGLAREVPSRIFLMPNSVPD------PTKESLSNK-----ISL 46 Query Match 20.8%; Score 1057.5; DB 21; Length 1000; Best Local Similarity 30.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             999
                                                                                                                                                   The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID). lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myccarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical dispnosis of Chlamydia infections. The present sequence is
                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                           9

Open reading frames (ORFs) of the genome encode by poplypeptides ANTS054-YAT949. The polypeptides can be used as Vaccines Aggainsteachlamydia trachomatis. On the polypeptides can be used as Vaccines be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, pepdymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; penemopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis; ss.

inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease
                                                                                                                                                            The present nucleotide sequence is provided in a specification relating to compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes compositions comprising a Chlamydia Capl protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia bNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used in a famune response, specifically stimulating a Chlamydia specific T-cell response or inhibiting the development of a Chlamydia infection in an animal. Methods from the present invention can be used: for detecting the presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia protein; and for treatment of a Chlamydia infection. ABL92394 to ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the
